Custom Axis, a world leader in suspension technology, and Hygear Suspension, a specialist in performance Snowmobile and ATV suspension, have partnered up to deliver a new line of shock absorbers for snowmobiles. Hygear Suspension has been named exclusive distributor of Custom Axis Shocks for snowmobiles in the United States. Custom Axis and Hygear Suspension's vast experience means customers will benefit from industry leading products, service, development, and tuning.

Hygear Suspension has been involved with the development of Custom Axis' Snowmobile shocks since 2004. Years of experience in suspension tuning, an on site wood chip test track, shock dyno, computerized telemetry system, and full machine and service shops, make Hygear Suspension the ideal partner to help Custom Axis develop snowmobile shocks.

Custom Axis shocks are hand built for each application from Hygear Suspension's exacting fitment specifications. They feature a large 5/8th shaft, coated aluminum body, improved low friction seal head with ice scraper, a remote or piggyback reservoir, and the most current damping system calibration and spring rates. All adjustable Custom Axis shocks feature a new 20 position low speed compression adjuster as well a more advanced independent high speed low speed adjuster. A newly designed Piggyback body cap is available for the sport series shocks as well as a user friendly spring preload and crossover adjustment device that doesn't require the use of tools. All Custom Axis shocks are designed with performance, serviceability, and adaptability in mind; they are fully rebuildable, tunable, and can even be reworked to new applications.

There are two series of Custom Axis Snowmobile Shocks, with a total of four levels of adjustability to choose from. Sport Series shocks are available in NA (non adjustable) or CA (compression adjustable). Pro Series shocks are available in DA (dual adjustable) form, allowing for both low speed compression and rebound adjustment, as well as the top of the line TA (triple adjustable) version, offering high speed compression, low speed compression, and rebound adjustment. All Sport and Pro Series shocks are sold with spring setups that are specially calibrated for each rider's application and vehicle handling characteristics. Shocks are sold as individual units, or as complete shock packages for your vehicle.

Custom Axis Snowmobile Shocks are available direct from Hygear Suspension or through any Authorized Hygear Suspension dealer across the country.
